

I started to get a warning on my computer, when it started. It kept saying that my battery was low and needed to be replaced. How could this be? If it is a rechargeable battery how can it go bad? This does not make sense to me.

But what happens to batteries as they recharge is that pretty soon they cannot hold the new charge to the previous degree. We can recharge and renew our "batteries" or our spirit with the church service or prayer meeting, but still not hold the charge. It takes a continuous indwelling of the Holy Spirit in us to bring us to the place we need to be.
